

Handy Rogue Syntax

Inline forEach

- Inline forEach:
`process(forEach in list)`
- Is convenience syntax for:
`forEach (item in list)`
`process(item)`
`endForEach`

Motivation

- Ergonomic programming,
AKA removing boilerplate

Rogue Language

min/max Alternatives

- `x = x.or_smaller(n)`
- `x = x.or_larger(n)`
- `x = x.clamped(low,high)`
- `x = x.clamped_low(low)`
- `x = x.clamped_high(high)`

Motivation

- min & max aren't always intuitive, e.g. using `max(x,0)` to set a minimum value
- `x=x.or_larger(n)` arguably better conveys intent than `x=max(x,n)`
